Hello,

Yes, you have my permission for that. BTW I do not plan to participate in this CCS discussion since for it will be no different as usual sell of these sources one more time for me. But I will obey request to open source these sources of course after receiving 20XMR.

I am requesting permission to publicly show this email in my CCS request to prove that we have had this email conversation. This is to simply prove that we have exchanged emails and nothing more.

Hello,

I do not object this proposal.

Hi MoneroOcean,

I was planning on opening a CCS on getmonero.org to open-source the modules altBlockManager and altBlockExchange. I was wondering whether or not I could open-source these two modules if I can raise 20 XMR to buy the code as described in your GitHub repository. I would like to ask if I have your permission to open-source these two modules prior to crowdsourcing the Monero required to buy the code as I don't want to waste anyone's time and would like to work with the developer to ensure it goes as smoothly as possible.

If given permission and I raise the 20 XMR to buy the code, I would like to first ask that you open-source the code on your GitHub repository under the MIT Expat licence. This is the same licence used for nodejs-pool in your repository. Second, if I am given permission to open-source the code, I will distribute it under the same MIT Expat licence in my own repository.

While this may seem like a bold request, I ask this of you because I want the Monero community to have free-flowing information and software with as little information or code kept secret as possible. The goal of this request is to allow all pools, large or small, to freely use this code. I don't want a future where features like this only exist in one or two mining pools which gate-keep them from the community behind large fees or closed-source binaries that disproportionately impacts the small pools.

Everyone should be on equal footing and I will be doing my best now and in the future to keep as much of the information and software free and open for the entire community. That is my promise to both you and the Monero community.
